RECOMMENDATIONS OF THE NMHH FOR THE CONSCIOUS CHOICE OF MOBILE DEVICES

1. **It's worth purchasing the device from one of the service providers in Hungary** to ensure that it's compatible with domestic technologies and to validate warranty claims when necessary.

3. **It's also worth considering the required screen size.** The latest devices typically have larger displays, making it easier to view content, plus they also have additional support features such as larger font sizes.

5. In the case of visual content, **data transmission rates are not to be ignored:** glitch-free uploading and downloading require a device capable of connecting to modern networks and suitable network coverage.

7. The latest devices include a number of **safety features to store passwords** in order to avoid storing them on paper, which is a high level data security risk.

9. **Modern devices are more likely to be waterproof,** which can save users the annoyance caused by minor accidents.

2. **Battery life is an important factor:** next generation mobiles have highly developed, maximum capacity batteries. This isn't always the case for older or second-hand models.

4. Those who frequently use their phones to view photos or videos should also take **screen resolution** into account. High resolution devices display images and videos in a higher

6. **The voice control feature** of modern devices allows selecting functions, controlling the smart device, finding a person's number and inputting text instead of typing.

8. **Wireless charging** is a convenience service for users: there's no need to fumble with tiny connectors.

10. It's also worth considering the use of **cloud-based storage services:** the cloud-based backups of data and images will not be lost if the device is damaged or important information is accidentally deleted from the device.
